DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-5 in Paper No. 9 is acknowledged.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Anno et al. (Anno) (U.S.Patent No. 6,340,963).

As to claims 1 and 4: Anno discloses a LCD comprising a plurality of signal lines (101) formed at constant intervals a common electrode (112) arranged in a vertical direction to the signal lines, a plurality of first electrostatic

Art Unit: 2871

protecting circuits (110, 111, Diodes) arranged at one side of the common electrode between adjacent first and second odd numbered signal lines in pairs to be connected with the first signal lines of the respective pairs and the common electrode and a plurality of second electrostatic protecting circuits (119) arranged at the other side of the common electrode to be connected with the second even numbered signal lines of the respective pairs and the common electrode (Fig. 1) (col. 6, lines 30-56). See (col. 6, lines 48-56) for discussion on odd and even numbered signal lines.

As to claims 2-3 and 5: Anno discloses that the common electrode includes two first and second lines (112A1 and 112A2), the first line (112A1) being connected with the first electrostatic protecting circuit (110) and the second line (112A2) being connected with the second electrostatic protecting circuit (111). The electrostatic protection circuits are arranged on both sides of the first and second signal lines (Fig. 1). The protrusions in signal lines for the electrostatic protecting circuits can also be seen in Fig. 1.
